

VAM Make your Female Cum

Follow the exact same steps, as shown in the Guide: Make your Male Cum  
But instead use for the Woman the following settings.

Settings for the Plugin

Help - Person fluids

IMPORTANT: If you switch particles in the Asset tab of the CUA, don't forget to reload the script to enable customization.

NOTES: This is an expensive physical particle system. Default parameters are meant to run properly. If you use continuous streams, performance can be impacted.

Fluid appearance is the way fluid looks depending on the light.

- Unlit ignores the light which means the fluid will be visible in complete darkness.

- Lit takes in account the lighting, which means the fluid will be invisible in complete darkness but it will also be coloured by the lights around.

Fluid shadows adds shadows to the stream and fluid. Might be expensive on some low end configurations.

Alternative motion mode (only for male characters) Changes the motion mode of the particles. Enabling this will modify the way the emitter spawn the particles and result in an unrealistic behavior of
